

ART DIFFUSOR[®] TRIM

The ArtDiffusor[®] Trim is a versatile, high frequency quadratic diffuser. Both profiles (Type A & Type B) offer diffusion in similar ranges and allow for customizable installations.

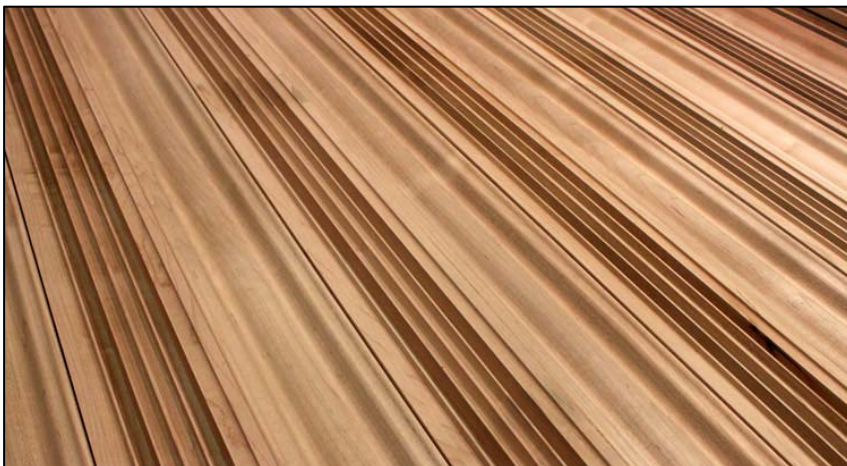

The different profiles can be used individually or together to modify the aesthetics of a room, while achieving the desired acoustic performance. ArtDiffusor[®] Trim can be installed with an air gap behind them, on top of panels, and with varied spacing to create slot absorbers for low frequency control in addition to the high frequency diffusion.

Planks can come in maple or other various woods, finished and stained, or completely raw, giving the end user the flexibility to customize the look themselves or get a turn-key solution.

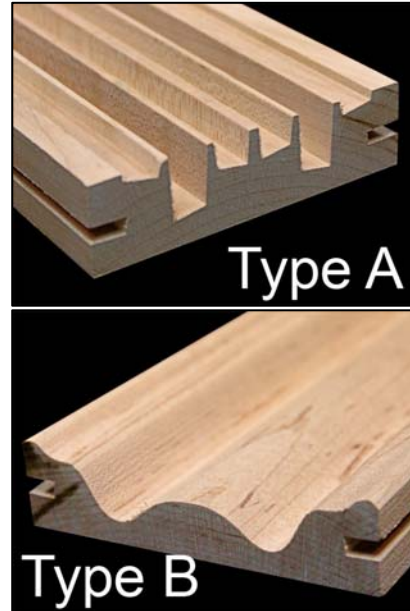

Some examples of different installations include:

- Back wall diffusion
- Slatted ceiling absorber
- Installation over or behind a stretchwall
- Door and window molding
- Chair-rail up or down & many more....

The standard size of a plank is about 1.5" x 4" x 48", however, longer planks can be provided if required.

ArtDiffusor[®] Trim – Alternating Type A and B planks.

Available Size:

1.25" x 4" x 48"

Material:

Maple (Other woods available)

Mount:

Direct mount (wall or ceiling)
