Acoustics First®

Sonora™ acoustical wall panels are used to create an acoustical environment that is not only pleasing to the ear, but looks as good as it sounds. Pictured left, simple framing over the panel adds detail. Sound Channels® wall covering on the main front wall creates a linear look.

Acoustics First materials allow you to hear clearly in your existing space while you build both your congregation and your new facility. From warehouse to worship, and back again, most of the materials used to tame the acoustics of this industrial space can be relocated and installed in a new sanctuary or multipurpose room without modification or additional cost.

Cloudscape® baffles are used in any room needing reverberation control for speech clarity. Baffles are economical and easy to install. They are available in vibrant colors to bring life to the most utilitarian space.

Baffles provide the most effective, least intrusive, and lowest cost sound treatment for any gymnasium, multi-purpose room or other large venue.

Council chamber and courtroom acoustics must provide clear sound and impressive appearance. Quarter round corner traps deliver both. Fabric selections for Sonora™ wall panels require no compromise or concession to form or function.

Recording studios have specific, critical needs for acoustics: shaping sound in the studio and accurately monitoring in the control room. Diffusers increase perceived acoustical space. Absorptive panels eliminate early reflective interference. Traps allow bass to be heard.

An acoustically dry, echo-free space that works for high-energy, amplified music sounds dull and lifeless for congregational singing. Diffusers keep sound "alive" while redirecting it to reduce intensity, and provide visual interest as well.

Diffusers, placed on a back wall, will increase the acoustical depth of the room.
